

Nevixra-Style Recreation Blueprint for MobileHub

Document purpose: A precise, section-by-section visual specification for an AI coding agent (Gemini CLI) to rebuild the *look and feel* of the Nevixra electronics theme as original code inside the MobileHub Next.js store. Read the entire document before writing any code. Also read `MOBILEHUB_PREMIUM_THEME_STRATEGY.md` in this folder — its honesty rules, conversion mechanics, and checkout specs apply here and are not repeated.

LEGAL NOTE (read first)

Build everything from scratch as **original code inspired by the layout**. Do NOT copy Nevixra's HTML, CSS, JavaScript, images, icons, or text content. Do NOT download or use pirated/nulled copies of the theme. Studying a design's structure and rebuilding it with your own code is legitimate; copying its files is not. All class names, styles, and markup must be your own.

0. WHAT "RECREATE" MEANS HERE

You will not achieve a pixel-perfect clone — and you should not try. The goal is the same **premium structure, rhythm, and component behavior**: the section order, the product-card anatomy, the header system, the promo rhythm. Re-skinned in MobileHub's orange/black identity, with honest content.

1. DESIGN TOKENS

Define as CSS variables / theme tokens first. No hardcoded one-off values.

- `--brand: #F97316` (MobileHub orange — primary buttons, badges, accents)
- `--brand-dark: #EA6A0A` (hover states)
- `--ink: #111418` (headlines, footer background)
- `--body-text: #3A3F47`
- `--muted: #8A919C` (secondary text, borders `#E7E9EE`)
- `--bg: #F6F7F9` (page background)
- `--card: #FFFFFF`
- `--sale: #E11D48` (discount prices, sale badges)
- `--star: #F5A623` (rating stars)
- `--success: #22C55E` (in-stock, WhatsApp)

- Radius: cards 14px, buttons pill (999px), inputs 10px
- Shadows: card `0 1px 2px rgba(16, 24, 40, .06)` ; hover lift `0 12px 28px rgba(16, 24, 40, .12)`
- Container: max-width 1280px, side padding 20px (mobile) / 32px (desktop)
- Fonts (Google Fonts): headlines — a bold condensed grotesque (e.g. "Archivo" 700/800, uppercase, tight letter-spacing); body — "Inter" 400/500/600

2. HOMEPAGE SECTION ORDER (top to bottom)

2.1 Top utility bar

Thin dark bar (`--ink` background, white 12px text). Left: "Free express delivery on orders over Rs. 3,000". Right: Track Order · Help · phone number. Hide on small mobile except the delivery message.

2.2 Main header (sticky)

White background, subtle bottom border, sticks on scroll with shadow.

- Left: MobileHub logo (MH mark + wordmark)
- Center: search bar — rounded, category dropdown ("All Categories") + text input + orange search button
- Right: icon buttons with count badges — Account, Wishlist, Cart (cart shows Rs. total next to icon on desktop)
- Mobile: logo left, icons right; search bar moves to a full-width row below

2.3 Navigation row

Below header (desktop): orange "Shop by Category" button (hamburger icon) opening a mega-menu panel with category list + icons; beside it text links: Home, Fast Chargers, Cables, Earbuds & Audio, Deals, Contact. Mobile: hamburger opens a slide-in drawer with accordion categories + links.

2.4 Hero

Grid: 2/3 width slider + 1/3 column of two stacked promo cards.

- Slider: 2–3 slides, each with kicker label ("New Arrival"), big bold headline, one-line subtext, two CTA buttons (orange solid + dark outline), product image right side, floating discount badge. Auto-rotates every 6s, dot indicators, arrows on hover.
- Promo cards: image background, short headline ("Up to 30% Off Chargers"), small CTA link.

2.5 Category tiles

Section title pattern (see 4.1). Row of 5–6 tiles: rounded image (circle or rounded-square), label below, item count in muted text. Clicking goes to category page. Horizontal scroll on mobile.

2.6 Featured products with tabs

Tabs: "New Arrivals" / "Best Sellers" / "On Sale" — switching swaps the product grid with a fade. Grid: 5 columns desktop, 4 tablet, 2 mobile. Uses the product card from Section 3.

2.7 Promo banner row

2–3 wide banners side by side (image + headline + "Shop Now" link). Example angles: "Bundle & Save", "Charger Week — up to 30% off".

2.8 Deal of the Day

Dark `--ink` panel, rounded 18px. Left: "Deal of the Day" kicker, product name, star rating, price + strikethrough, countdown timer (4 boxes: Days/Hrs/Min/Sec, monospace digits), orange CTA. Right: product image. Timer counts to a real end date from config — never a fake perpetual countdown.

2.9 Best sellers carousel

Horizontal scroll-snap row of product cards with arrow buttons. Same card component.

2.10 Brand strip

"Brands we stock" label + row of brand names (ANKER, BASEUS, UGREEN, JOYROOM, SAMSUNG) in muted bold text. NOT "official partners".

2.11 Testimonials

3 cards: quote, name, star row. **Only real reviews.** Build an honest empty state too ("Reviews from verified buyers will appear here") for pre-launch.

2.12 Blog / guides (optional at launch)

3 article cards (image, date, title). May ship as a designed placeholder section linking to a future blog.

2.13 Newsletter

Orange gradient panel: "Join the VIP Club" headline, one-line benefit, email input + dark button. Success state message.

2.14 Footer

Dark `--ink`, 4 columns: Brand blurb + social icons | Quick Links | Customer Service (Track Order, Shipping, 7-Day Replacement, Contact) | Helpline (WhatsApp, phone, email, address — `{{PLACEHOLDER}}` until real). Bottom row: payment method badges (COD, JazzCash, Easypaisa, cards, bank transfer) + copyright.

2.15 Floating elements

WhatsApp chat button (bottom-right, green, pulse on first visit only), back-to-top button appears after scrolling.

3. PRODUCT CARD ANATOMY (where the premium feel lives)

Build ONE card component, reuse everywhere.

- **Image area:** 1:1 aspect, `--card` background, product image centered with padding; on hover image scales 1.06 (desktop). Top-left: stacked badges — red `-26%` pill, orange `HOT` pill (only when true). Top-right: wishlist heart button, hidden until hover on desktop, always visible on mobile.
- **Quick actions on hover (desktop):** bottom of image reveals "Add to Cart" bar sliding up + quick-view icon.
- **Body:** brand name (11px, uppercase, muted) → product title (15px, 600, 2-line clamp) → star row (stars + review count in muted, or "No reviews yet") → price row: bold 18px current price + strikethrough muted old price + green "Save Rs. X" text.
- **Mobile:** Add button always visible below price (full-width, orange, 44px height).
- **Card:** white, 14px radius, 1px border, hover lifts with shadow. No fake "sold" counts.

4. RECURRING PATTERNS

4.1 Section header

Small orange uppercase kicker ("Trending") + big bold headline ("Featured Products") + right-aligned "View All →" link. 48px section spacing desktop, 32px mobile.

4.2 Buttons

Primary: orange pill, white text, 600 weight, hover darkens. Secondary: dark pill. Ghost: bordered. All ≥44px tap height.

4.3 Badges & trust chips

Pill badges for discounts; icon + bold title + one-line text for trust items (COD available · Quality-checked · 7-day replacement · WhatsApp support).

5. KEY INTERACTIONS

1. Sticky header gains shadow after 10px scroll
 2. Mega menu: hover (desktop) / tap (mobile), closes on outside click or Escape
 3. Cart: slide-in drawer from right, quantity steppers, free-shipping progress bar toward Rs. 3,000
 4. Quick-view modal: image left, details right, Add to Cart
 5. Countdown timer: real end date from site config
 6. Tabs: fade transition, URL hash optional
 7. Carousels: scroll-snap + arrow buttons, no auto-play
 8. Mobile nav drawer: accordion categories, focus trap, Escape closes
-

6. RESPONSIVE RULES

- $\geq 1200\text{px}$: full layout, 5-col product grid
 - 768–1199px: 4-col grid, hero stacks promo cards below slider
 - $< 768\text{px}$: 2-col product grid, drawer nav, search row below header, Add buttons always visible, countdown boxes shrink, footer stacks to 1 column
 - Touch targets $\geq 44\text{px}$ everywhere; no hover-dependent actions on mobile
-

7. BUILD ORDER FOR THE AGENT

1. Tokens (Section 1) + base styles + section-header/button/badge primitives (Section 4)
2. Header system: utility bar + main header + nav + mega menu + mobile drawer (2.1–2.3, 5.1–5.2, 5.8)
3. Product card component (Section 3) — perfect this, everything depends on it
4. Hero + category tiles + tabbed products (2.4–2.6)
5. Banners + deal of the day + carousel + brands (2.7–2.10)
6. Testimonials + newsletter + footer + floating buttons (2.11–2.15)
7. Inner pages per `MOBILEHUB_PREMIUM_THEME_STRATEGY.md` Phase 3 (shop, product detail, cart, COD-first checkout)

8. After EACH phase: production build passes, visual check at 360px and 1440px

8. CONSTRAINTS

- Original code only (see Legal Note). Bootstrap is allowed as a dependency, but prefer the existing styling system of the repo; do not mix two frameworks.
- Do not change product data, prices, routes, or checkout/payment logic — theme layer only.
- Images: use the store's real product photos. If missing, render a clean branded placeholder tile with the product name — never hotlink demo images.
- Honesty rules from the strategy doc apply: no invented stats, no "official/authorized" claims, `{{PLACEHOLDER}}` for unknown contact data, TODO list in final report.
- Performance: lazy-load below-fold images, no heavy animation libraries, system-feel animations only (transform/opacity).

9. ACCEPTANCE CRITERIA

- ☐ Homepage follows the section order in Section 2 on desktop and mobile
- ☐ Product cards match the anatomy in Section 3, including hover and mobile states
- ☐ MobileHub orange/black identity throughout — no leftover third-party branding
- ☐ Sticky header, mega menu, cart drawer, quick view, countdown all functional
- ☐ 2-col product grid on a 360px viewport with no overflow or overlap
- ☐ Zero fake numbers, zero "official/authorized" claims, placeholders listed in TODO report
- ☐ Production build passes with zero errors
